---

# Project base

---

- Contribute funds to a project
- Complete the project (founder)
- Request the funds back

# Project base

---

## Members

name	type
founder	address
name	string
description	string
budget	uint
totalReceived	uint
started	bool
completed	bool
received	addr $\Rightarrow$ uint

## Events

- > ProjectStarted
- > ProjectCompleted

## Modifiers

- > isFounder
- > hasFunds
- > projectRunning

# Milestones

---

```
struct Milestone {  
    bool completed;  
    string description;  
    uint deadline;  
    uint percentageOfBudget;  
}
```

- inherits from project base
- each project has array of milestones
- not all funds released at once
- individual deadlines
- individual payouts

Demo

---

# Angels

---

- inherits from project with milestones
- users that contribute a certain amount become angels
- angels can request to halt / resume the project
- when the project is halted, no funds can be released by the founder
- when a project is halted, the open milestones are delayed
- Emits events when new angel is born or project is halted / resumed
