# Milestones

---

```
struct Milestone {  
    bool completed;  
    string description;  
    uint deadline;  
    uint percentageOfBudget;  
}
```

- inherits from project base
- each project has array of milestones
- not all funds released at once
- individual deadlines
- individual payouts

---

# Angels

---

- inherits from project with milestones
- users that contribute a certain amount become angels
- angels can request to halt / resume the project
- when the project is halted, no funds can be released by the founder
- when a project is halted, the open milestones are delayed
- Emits events when new angel is born or project is halted / resumed
